Data Storage & Backup

Our technical experts work to help customers decide the data storage, backup, and archival options that best meet their organizations' requirements.

OFFERINGS

Shared File Storage

Our shared file storage options are provided through network-attached storage and can work on hybrid-architecture systems. Co-location and managed-hosting customers can securely store files from a centralized disk on a robust, centralized infrastructure.

Managed-Hosting Storage

Provided through a storage area network, managed hosting can scale easily up to petabytes to accommodate customer's storage needs.

Backup & Storage

Customers can take advantage of our local cloud-storage solutions to retain large amounts of unstructured data in backup storage and archival storage.
